Thousands of fake Facebook accounts shut down by Meta were primed to polarize voters ahead of 2024

Architecture

The Problem With Mordern Democracies

The proliferation of fake news, especially on social media platforms, has become an increasing concern in recent years when it comes to its effects on governmental institutions and processes.

Fake news often refers to intentionally false or misleading content presented as real news meant to influence public opinion or obscure the truth and that makes extremely difficult among citizens differentiate truth from fiction when forming opinions about political leaders, parties, and policy issues.

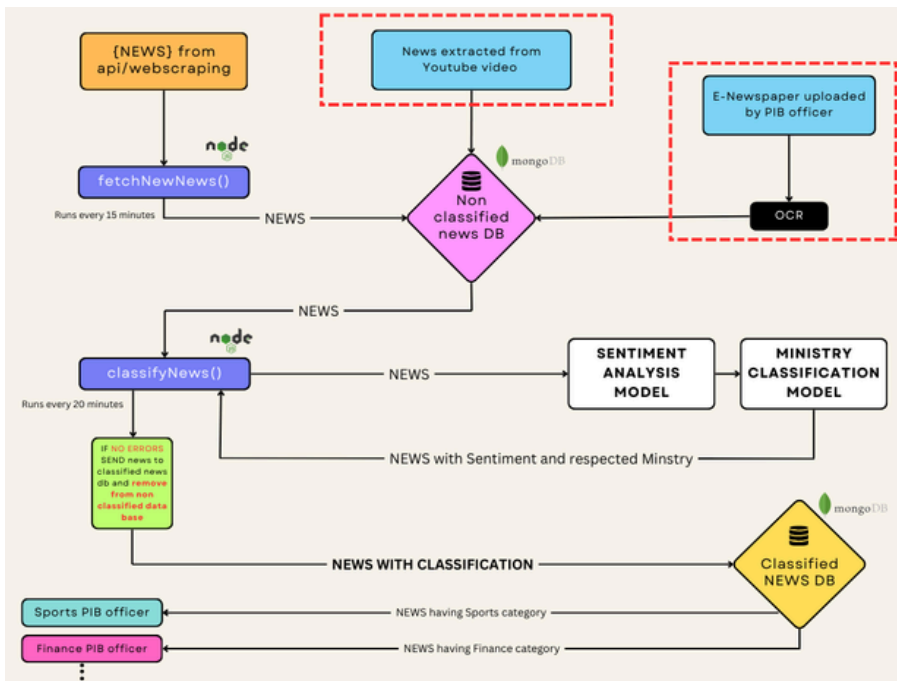

Solution : The DemocraticNet

Democratic Net is the ultimate ally in fortifying democratic values against the perils of misinformation and external propaganda. In an era where the digital landscape is rife with disinformation campaigns aimed at destabilizing nations, Democratic Net stands as a bastion of truth and resilience.

Our platform harnesses the power of state-of-the-art deep learning models to meticulously analyze and counteract false narratives that threaten the fabric of democratic societies.

The Future Plan

Scaling Up Plan

- Cloud Resources: Utilize cloud services for auto-scaling compute and storage.
- Databricks Scaling: Enable auto-scaling for efficient resource management.
- Containerization: Use Docker and Kubernetes for scalable and portable deployments.
- Distributed Processing: Implement Apache Spark to handle large datasets.
- Real-time Processing: Use tools like Kafka for real-time data streams.
- Version Control: Track models and experiments using MLflow.

Security Plan

- Encryption: Encrypt data in transit and at rest.
- Access Control: Implement RBAC and IAM for data access.
- Backup and Recovery: Implement and test regular data backups.
- Input Validation: Prevent injection attacks with strong validation.

Thanks!
